YUKON SPATIAL PRICE SURVEY

JUNE 1972

Whitehorse - nton
Whitehorse - ouver

FOREWORD

The following report is presented as a summary to the June 1983 spatial price survey between Whitehorse and the cities of Vancouver and Edmonton. This survey was made possible by the assistance and co-operation of the business communities of Whitehorse, Vancouver and Edmonton. The Economic Research and Planning Branch would also like to acknowledge the assistance provided by the Consumer's Association of Canada in each of the three cities.

PREAMBLE

A spatial price survey is designed to compare the prices of consumer goods and services in one geographic centre with those in another. Prices for identical and directly comparable items are collected and combined to form price indexes. The price indexes are aggregated according to their relative importance to household expenditures. The resultant index reflects both consumption and price.

The Yukon Spatial Price Survey is similar to the price surveys undertaken by Statistics Canada but is more comprehensive. The Yukon survey adheres to pure price comparison theory; accordingly, only identical items and quantities consumed are compared. The alternative, or cost of living approach, permits differing consumption in each geographic centre - quantities consumed may vary because of social, economic, geographic or environmental influences. This alternative, although conceptually preferable, is not operationally feasible nor does it permit direct statements of price levels.

HIGHLIGHTS

The following highlights incorporate price comparisons between the City of Whitehorse and two southern regional centres: Vancouver and Edmonton. Results for the Whitehorse - Edmonton survey include 7,501 price quotes for 1,380 identical consumer goods and services. Price comparisons between Whitehorse and Vancouver reflect 7,535 individual prices for 1,312 identical commodities. All items surveyed cover 89.53 percent of the goods in seven major components of consumer spending: food, housing, clothing, transportation, health and personal care, recreation, reading and education, and tobacco and alcohol.

NOTES ON TEMPORAL SHIFT

A temporal shift in spatial price indexes will occur when rates of growth in retail prices between cities vary over time. This situation was demonstrated for Whitehorse and Edmonton, and Whitehorse and Vancouver between June 1982 and June 1983.

- a) Edmonton: The overall price gap between Whitehorse and Edmonton widened marginally between June 1982 and June 1983. Survey results also indicate higher rates of growth in prices in Whitehorse when compared to Edmonton:
- food prices increased in relative terms from 27.7 in 1982 to 28.3 percent higher in Whitehorse than Edmonton. This could indicate a relative rate of growth in Edmonton that is less than that experienced in Whitehorse for food;
 - major areas in which price levels grew more rapidly than Edmonton were in housing (from 124.4 to 129.0) and recreation, reading and education (from 112.0 to 114.9).
- b) Vancouver: The overall price difference between Whitehorse and Vancouver increased slightly between 1982 and 1983 suggesting growth rates that are higher for Whitehorse than Vancouver:
- spatial price levels in Whitehorse when compared to Vancouver for food, housing and tobacco and alcohol remained similar in percentage terms;
 - clothing experienced a higher rate of growth in Whitehorse than in Vancouver portrayed by the widening of the gap between spatial price indexes (103.4 in 1982 to 110.8 in 1983).

APPENDIX B**DEFINITIONS**

DEFINITIONS

- Price:**
- represents the prevailing prices for retail goods or services;
 - regular sales prices available to all consumers were used - the only exceptions include sales items brought in specifically for a clearance sale which are not normally available to the consumer on a continual basis. .
- Index:**
- is a ratio of one price to another (for presentation, the index has been multiplied by 100). In this survey all indexes refer to the comparison of Whitehorse prices with those of the base cities Edmonton and Vancouver;
 - all price comparisons were calculated using only identical matches (ie. only identical brands and model numbers represent valid item comparisons).
- Weight:**
- represents the relative importance of an item to a household's annual expenditure on consumer goods and services. This weight is expressed as a percentage and can be interpreted as a percentage of a household's disposable income spent on any given item or collection of items.
